Procedure	Mix phase A, begin heating to 75-80C. Premix phase B into a slurry and add to phase A. Continue heating. In a separate beaker, heat phase C (leave out Sanmica AV) to 75-80C using propeller blade. Once waxes are melted, add Sanmica AV to phase C. After oil phase and water phase have reached 75-80C, add phase C to phase AB under homogenizer for 5 minutes. Cool batch using sweep blade, add phase D, E and F stepwise. At 45C, add phase G and phase H. Cool to 30C.
