TOTAL PERCENT				100.00

Procedure: Weigh all of Phase A into a glass beaker and heat to 90°C. Mix under propeller agitation until all materials are dissolved and the base is uniform. Slowly add Phase B to the beaker. Mix at moderate speed until all of the pearl is completely incorporated. Do not mix too rapidly to avoid air entrapment. Lower the temperature to 80 °C. Pour into desired lipstick molds, freeze and demold after 10 minutes.
